Introduction

• In Low resourced countries, data is stored and communicated using handwritten documents

• This data gets scraped as storing and analyzing it is a challenge

• There is a need to digitize and structure this information

• These documents, such as medical prescriptions, are usually bilingual – containing both Urdu and English

Importance / Motivation

- Digitizing the data makes it more accessible

- Helps in making data-driven decision making

- Data-driven decisions contribute towards long term sustainability

- Digitizing documents such as Medical Prescriptions helps in improvement of healthcare sector
